- Partner, Lee and Li, Attorneys-at-Law
- Director, SOSA (Secure Online Shopping Association)

Education

- Harvard Law School, LL.M. 1998

Specialize in

- Personal Data Protection
- GDPR and WHOIS System
- ccTLD Sponsorship Agreement
- New gTLD Applications

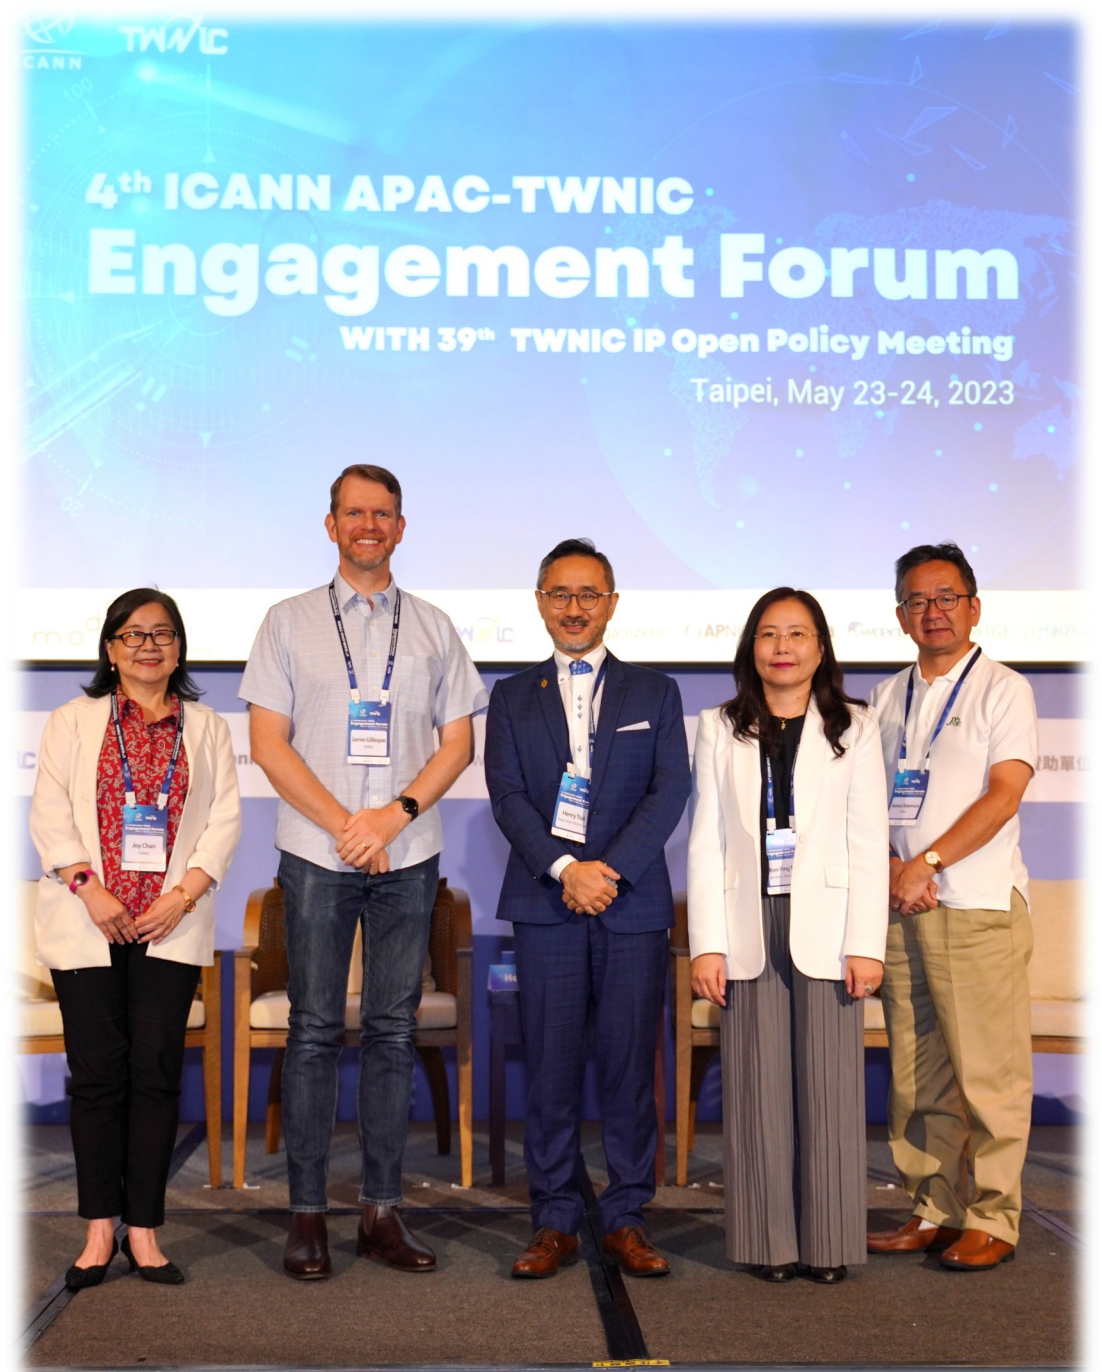

Promoting Domestic Internet Governance

- Serve as a mentor in DNS Public Policy Workshop to guide youths through the Internet governance ecosystem.
- Serve as a panelist at various forums on Internet issues.

Sharing Our Experience

- Discuss data privacy and security, domain name abuses and related issues at ICANN APAC-TWNIC Engagement Forum.
<https://s.moda.gov.tw/fjyknPxtUxYx>
<https://s.moda.gov.tw/TDFihxWxbZKt>
- Share our experience with members of the other ICANN communities, including IPC and ICANN APAC personnel.
- Support gender equality and participate in "DNS Women" to advocate for women working in this sector.

My Vision

- Serve and coordinate with GAC participants and help GAC to become more effective and cohesive in facing issues concerning PDPs and GAC.
- Organize the best model for GAC members to exchange experiences of Internet governance and practices.
- Draw from experiences of ICANN society and IGF to energize GAC.
- Share professional legal knowledge with GAC members.
- Bring female power into play, coordinate opinions from GAC members.

Together, we can establish a common, positive environment for regulating and governing the Internet.

Ken-Ying Tseng

Opinions on the current issues at ICANN

DNS Abuse

When facilitating the free flow of information on the Internet and protecting the public's right to know, we need to find a balance between such freedom and the protection of consumers, cybersecurity, children and youths, intellectual property rights, etc.

Other than the communication channels between GAC and GNSO, it would be helpful and practical to create a closer, cooperative and collaborative connection among GAC members on this issue.

Subsequent Round of New gTLD

Adequate procedures should be established for protecting and upholding the rights of stakeholders. Stakeholders in both public and private sectors should be given the opportunities to express and exercise their rights. Mechanisms such as receiving proper warnings should be established.

Opinions on the current issues at ICANN

Protection of Personal Data

We welcome the advancement of RDRS and look forward to reviewing its operational statistics.

If such statistics indicate RDRS can truly solve the concerns of GAC as well as the other stakeholders, I would suggest that ICANN promote or offer an incentive to bring in more CPH members to participate in the RDRS pilot operations.

Universal Acceptance

The promotion of Universal Acceptance is an indicator of digital inclusion; therefore, we support ICANN's continuation of its promotional activities and agree that the GAC values and maintains its interest in this subject.

Internet Fragmentation

The openness of the Internet has been threatened by the fragmentation of the Internet.

We support the facilitation of measures to maintain the openness of the Internet and ICANN's mission, "One World One Internet".

What Ken-Ying can do for ICANN

Ms. Tseng is an active participant of ICANN, IGF and other Internet-related forums. Being a known experienced lawyer, she would draw from her experiences and insights and make meaningful contributions to GAC. Should she be elected as a vice chair, Ms. Tseng would devote herself to serving and cooperating with GAC participants on PDPs and GAC matters.

With the chance of being vice chair, Ken-Ying would help the Chair and the GAC community about identifying important policy issues and facilitating effective discussions on such issues.

Given the rapid development of emerging technologies, we look forward to addressing potential threats as well as exploring the benefits that new technologies would bring.
