

SSAD SRT Update

18 Oct 2027

SSAD SRT High-Level Principles

Balance the needs of all three stakeholder perspectives:

1 DATA CONTROLLERS

Entities responsible for reviewing requests and bearing liability for improper disclosure.

2 REQUESTORS

Entities who submit requests through the system and seek access to data for a variety of reasons.

3 DATA SUBJECTS

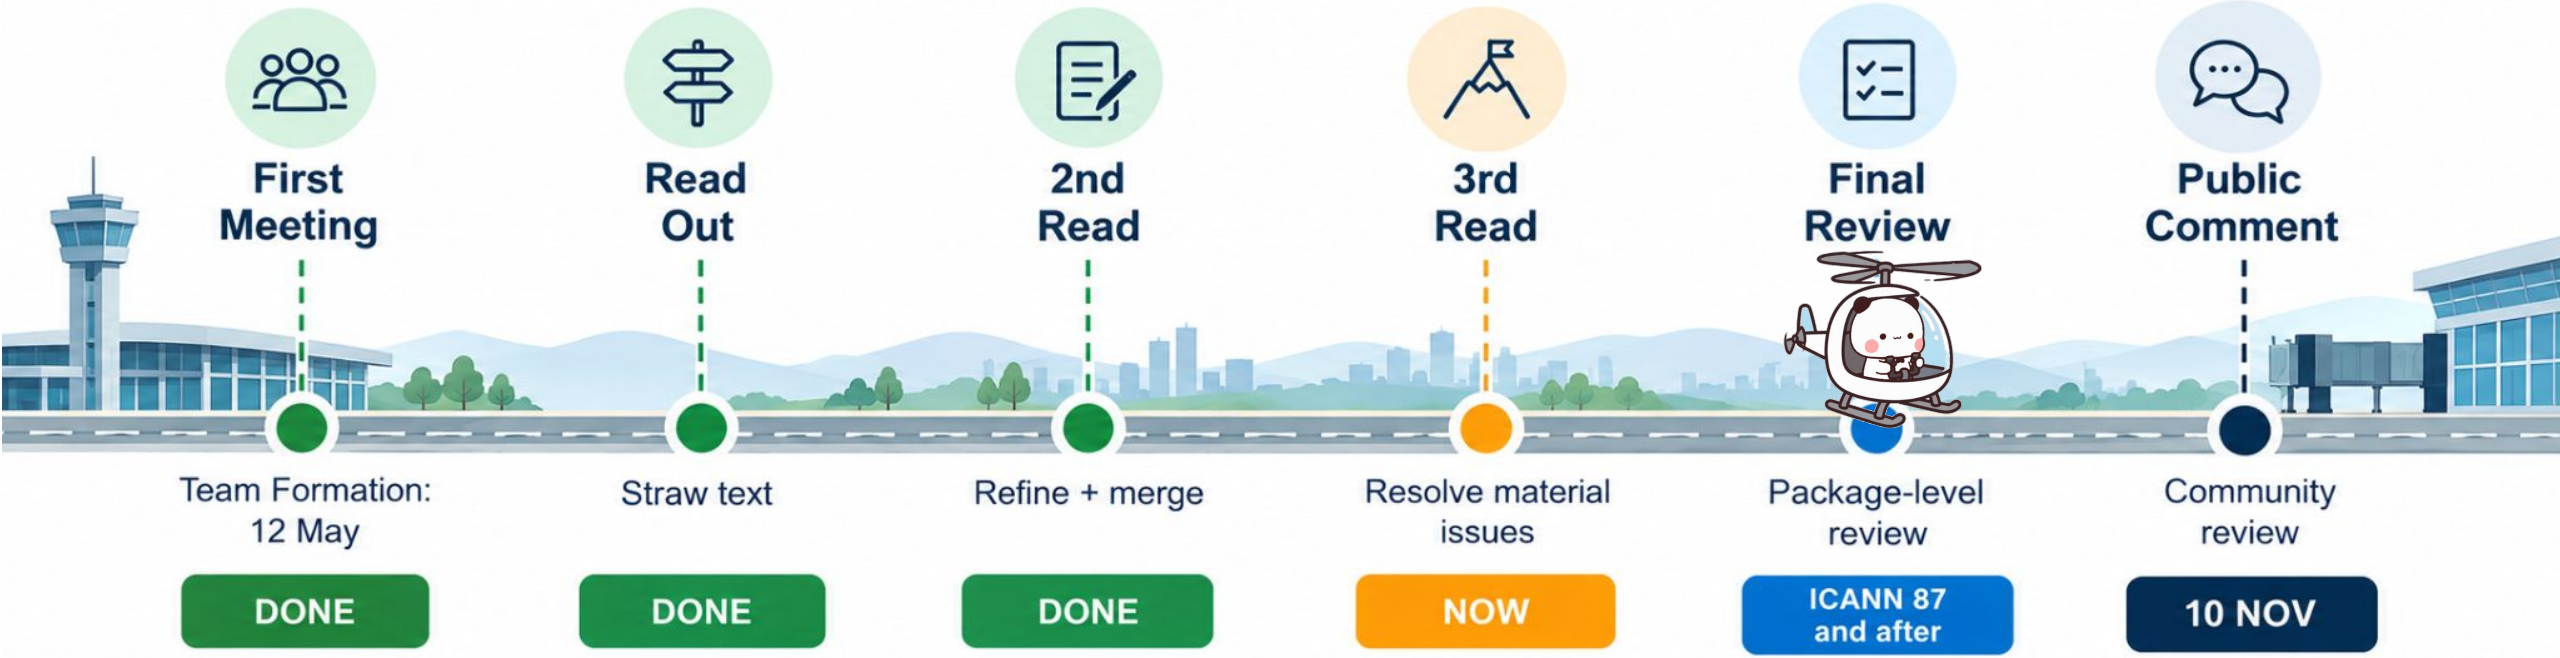

Registrants with an expectation that personal data will not be improperly disclosed.

Two final tests

IMPLEMENTABLE? Does it allow sufficient flexibility for implementation?

BOARD-READY? Could the modified recommendation be adopted by the Board?

How far we have come - the path to ICANN87

How far we have come - Milestones

- Combined original 18 Recommendations into 12 draft supplemental Recommendations
- Since our first meeting in May we've had 28 SRT meetings
- Two full day in person meetings at ICANN 86 and now at ICANN 87
- Produced a public comment draft under review at ICANN 87

What are we trying to achieve

1

Predictable entry point

standardized request content, routing, status and response paths, predictability

2

Reliable accountability

authentication, agreements, query-abuse, logs and audits

3

Lawful disclosure review

CP review, rationale, applicable law and privacy safeguards

4

Operational learning

reporting, Standing Committee review and post-launch adjustments

The Supplemental Recommendations aim to preserve the core value of SSAD while reflecting RDRS lessons learned and Community / Board input received.

SRT ROAD FROM ICANN87 TO SUPPLEMENTAL RECS
